

AIP Conference Proceedings, Volume 1628
Proceedings of the 29th International Symposium on Rarefied Gas Dynamics

Table of Contents

Preface: 29th International Symposium on Rarefied Gas Dynamics Jing Fan	1
Previous RGD Symposia	3
RGD29 Committees	4
Session Chairs and Reviewers	5
Memorial	6
 PART A 	
PLENARY - HAROLD GRAD LECTURE	
Quantitative analysis of the correlations in the Boltzmann-Grad limit for hard spheres M. Pulvirenti	7
 PLENARY - LLOYD THOMAS LECTURE	
Nanostructure synthesis from high velocity gas mixture flows Aleksy K. Rebrov	14
 PLENARY - GRAEME A. BIRD LECTURE	
Direct simulation Monte Carlo: The quest for speed Michael A. Gallis, John R. Torczynski, Steven J. Plimpton, Daniel J. Rader, and Timothy Koehler	27
 BOLTZMANN AND RELATED EQUATIONS	
3D linearized stability analysis of various forms of Burnett equations Wenwen Zhao, Weifang Chen, Hualin Liu, and Ramesh K. Agarwal	37
 Computation of 1-D shock structure in a gas in rotational non-equilibrium using a new set of simplified Burnett equations Wenwen Zhao, Weifang Chen, Hualin Liu, and Ramesh K. Agarwal	 45

On the drag exerted on the sphere by a slow uniform flow of a rarefied gas Satoshi Taguchi	51
Numerical analysis of the Taylor-Vortex flow of a slightly rarefied gas Kazuo Aoki, Ryo Kagaya, Shingo Kosuge, and Hiroaki Yoshida	60
Corrections to the Rankine-Hugoniot conditions for curved shock waves Carlo Lancellotti and Yubei Yue	68
A conservative discontinuous Galerkin scheme with $O(N^2)$ operations in computing Boltzmann collision weight matrix Irene M. Gamba and Chenglong Zhang	75
Evaluation of BGK-type models of the Boltzmann equation Wei Gao and Quanhua Sun	84
Gas-kinetic unified algorithm for hypersonic flows covering various flow regimes solving Boltzmann model equation in nonequilibrium effect Zhihui Li, Junlin Wu, Qiang Ma, Xinyu Jiang, and Hanxin Zhang	92
On invariant discretizations of Boltzmann equation V. L. Saveliev	100
DSMC AND RELATED SIMULATIONS	
Oxygen transport properties estimation by DSMC-CT simulations Domenico Bruno, Aldo Frezzotti, and Gian Pietro Ghiroldi	108
Effect of molecular models on viscosity and thermal conductivity calculations Andrew B. Weaver and Alina A. Alexeenko	115
When do we need attractive-repulsive intermolecular potentials? Ayyaswamy Venkatraman	123
A detailed DSMC surface chemistry model A. N. Molchanova (Shumakova), A. V. Kashkovsky, and Ye. A. Bondar	131

Comparative analysis of condensation models within DSMC Nikolay Y. Bykov and Yuriy E. Gorbachev	139
Monte Carlo modeling of electron density in hypersonic rarefied gas flows Jin Fan, Yuhuai Zhang, and Jianzheng Jiang	148
Validation of DSMC results for chemically nonequilibrium air flows against measurements of the electron number density in RAM-C II flight experiment Alexander A. Shevyrin, Pavel V. Vashchenkov, Yevgeniy A. Bondar, and Mikhail S. Ivanov	155
Hypersonic separated flows about "tick" configurations with sensitivity to model design J. N. Moss, S. O'Byrne, and S. L. Gai	162
Study of plume behaviour of a convergent-divergent and aerospike nozzle at high altitudes using DSMC Ferdin S. Donbosco and Rakesh Kumar	170
Mach number impact on heat flux and pressure distributions of a hypersonic flow over combined gap/step geometries Paulo H. M. Leite and Wilson F. N. Santos	176
Numerical investigation of rarefaction effects in the vicinity of a sharp leading edge Shaowu Pan, Zhenxun Gao, and Chunhian Lee	185
3D DSMC computations on a heterogeneous CPU-GPU cluster with a large number of GPUs Alexander Kashkovsky	192
DSMC investigations of reentry vehicle aerothermodynamics on GPU Alexander Kashkovsky	199
The influences of microstructural parameters on the gaseous thermal conductivity in nanoporous material Xinpeng Zhao, Zengyao Li, He Liu, and Wenquan Tao	205
Simulation of a complete triple turbo molecular pumping stage using direct simulation Monte Carlo in 3D Martin Rose	212
Numerical simulation of rarefied laminar flow past a circular cylinder M. Cevdet Çelenligil	220

The rarefied gas flow through a grid of cylinders M. Yu. Plotnikov	228
Numerical examination of optical lattice gas heating within realistic optical cavities J. S. Graul, S. F. Gimelshein, and T. C. Lilly	234
Kinetic view of chirped optical lattice gas heating J. S. Graul, S. F. Gimelshein, and T. C. Lilly	242
Vorticity in micro scale shock vortex interaction Di Wu, Yuhe Shang, and Hong Xiao	249
DSMC simulation of micro/nano flows using SBT-TAS technique Ali Amiri-Jaghargh, Hassan Nami, Stefan Stefanov, and Ehsan Roohi	255
Extension of the SBT-TAS algorithm to curved boundary geometries Bijan Goshayeshi, Ehsan Roohi, Stefan Stefanov, and Javad Abolfazli Esfahani	266
Adaptive exit boundary conditions applied to DSMC stream flows D. J. Auld	276
Density distribution based interpolated grid for DSMC Tapan K. Mankodi, Upendra V. Bhandarkar, and Bhalchandra P. Puranik	282
Dynamic load balance scheme for the DSMC algorithm Jin Li, Xiangren Geng, Dingwu Jiang, and Jianqiang Chen	288
A new computational particle weight algorithm in DSMC simulation Fei Huang, Zhi Chen, Pengfei Li, and Xiaoli Cheng	296
Approximate approach to evaluation of the DSMC statistical error M. Yu. Plotnikov and E. V. Shkarupa	305
A steady-state convergence detection method for Monte Carlo simulation Abolfazl Karchani, Omid Ejtehad, and Rho Shin Myong	313

Error estimation for CFD aeroheating prediction under rarefied flow condition Yazhong Jiang, Zhenxun Gao, Chongwen Jiang, and Chunhian Lee	318
Continuum regions of the flow in the evaporation-condensation problems P. A. Skovorodko	324
EXPERIMENTAL PROCEDURES IN RGD	
Determination of thermophoretic force on a particle in transitional flow Ryan Bosworth, Andrew Ketsdever, Natalia Gimelshein, and Sergey Gimelshein	332
Measurements of the evaporation coefficient of water based on molecular gas dynamics Shigeto Nakamura and Takeru Yano	339
Experimental characterization of edge force on the Crookes radiometer Austin L. Ventura, Andrew D. Ketsdever, Natalia E. Gimelshein, and Sergey F. Gimelshein	346
Dynamic and hydrodynamic response of premixed methane-air flame to nanosecond pulsed discharges Shaohua Zhang, Xilong Yu, Heng Xiong, Hui Zeng, and Fei Li	351
Coherent Rayleigh-Brillouin scattering as a flow diagnostic technique J. S. Graul and T. C. Lilly	359
GAS-SURFACE INTERACTIONS	
Boundary conditions for the Boltzmann equation for rough walls Stéphane Brull and Pierre Charrier	368
Second order temperature jump boundary condition for nano/microscale and hypersonic rarefied gas flow simulations Nam T. P. Le and Ehsan Roohi	374
Derivation of generalized Maxwell velocity slip model Qin Yang, Yulu Liu, Haijun Zhang, and Chuncheng Zuo	382
Poly-Gaussian model of randomly rough surface in rarefied gas flow Olga A. Aksenova and Iskander A. Khalidov	388

Numerical analysis of kinetic boundary conditions at net evaporation/condensation interfaces in various liquid temperatures based on mean-field kinetic theory Misaki Kon, Kazumichi Kobayashi, and Masao Watanabe	398
Molecular dynamics simulation on evaporation molecules in a vapor-liquid equilibrium state Kazumichi Kobayashi, Kazumasa Hori, Hisao Yaguchi, and Masao Watanabe	404
Solving transient temperature-jump models over curved micro-surfaces Ali Dinler	411
Influence of gas/surface interaction on shock wave propagation through a tube H. Ishida, A. Tezuka, and T. Abe	419
Effect of a boundary condition on the cylindrical Couette flow of a rarefied gas Shingo Kosuge	423
Effect of kinetic boundary condition on the thermal transpiration coefficient Hiroshi Sugimoto and Kenjiro Amakawa	431
Effect of growth temperature on composition control for vapor deposition of $\text{YBa}_2\text{Cu}_3\text{O}_{7-\delta}$ precursor films Chong Liu, Lianhong Wang, Yonghua Shu, and Jing Fan	439
$\text{YBa}_2\text{Cu}_3\text{O}_{7-\delta}$ superconducting films prepared by low pressure post-annealing Lianhong Wang, Chong Liu, and Jing Fan	446
Quantitative analysis of oxygen content in copper oxide films using ultra microbalance Yonghua Shu, Lianhong Wang, Chong Liu, and Jing Fan	451
GRANULAR FLUIDS	
Rheology of dense sheared granular liquids (Invited) Koshiro Suzuki and Hisao Hayakawa	457
Bifurcation and nonlinear behavior of compartmentalized granular gases Meiyang Hou, Rui Liu, Yinchang Li, Yin Zhang, and Sajjad Hussain Shah	467
Influence of the driving velocity on the local velocity distribution of granular gases Yanpei Chen, Pierre Evesque, and Meiyang Hou	475

Shock waves in a dilute granular gas M. H. Lakshminarayana Reddy, Santosh Ansumali, and Meheboob Alam	480
Thermal diffusion segregation of an impurity in a driven granular fluid Francisco Vega Reyes and Vicente Garz3	488
Properties of the homogeneous cooling state of a gas of inelastic rough particles Francisco Vega Reyes, Andres Santos, and Gilberto M. Kremer	494
Evolution of shock instability in granular gases with viscoelastic collisions Nick Sirmas and Matei Radulescu	502
HYBRID METHODS	
Further development of a hybrid particle-continuum method for transitional hypersonic flows Ashley M. Verhoff and Iain D. Boyd	510
N-S/DSMC hybrid simulation of hypersonic flow over blunt body including wakes Zhonghua Li, Zhihui Li, Haiyan Li, Yanguang Yang, and Xinyu Jiang	519
A new near-equilibrium breakdown parameter based on the Rayleigh-Onsager dissipation function H. Xiao, R. S. Myong, and S. Singh	527
Numerical investigations of protector effect on a thruster Zhenyu Tang, Bijiao He, and Guobiao Cai	533
Multi-GPU kinetic solvers using MPI and CUDA Sergey Zabelok, Robert Arslanbekov, and Vladimir Kolobov	539
JET AND PLUMES	
Analytical and experimental studies of leak location and environment characterization for the international space station Michael Woronowicz, Joshua Abel, David Autrey, Rebecca Blackmon, Tim Bond, Martin Brown, Jesse Buffington, Edward Cheng, Danielle DeLatte, Kelvin Garcia, Jodie Glenn, Doug Hawk, Jonathan Ma, Jelila Mohammed, Kristina Montt de Garcia, Radford Perry, Dino Rossetti, Kimathi Tull, and Eric Warren	547
The roles of the binodal curve and the spinodal curve in expansions from the supercritical state with flashing Eldon L. Knuth, David R. Miller, and Uzi Even	555

Highly rarefied jet flow farfield density properties Chunpei Cai	563
DSMC simulation of two-phase plume flow with UV radiation Jie Li, Ying Liu, Ning Wang, and Ling Jin	569
Numerical investigation of two interacting parallel thruster-plumes and comparison to experiment Martin Grabe, André Holz, Stefan Ziegenhagen, and Klaus Hannemann	581
DSMC numerical simulation of lateral jet interaction with rarefied atmosphere Jie Liang, Zhihui Li, Xuguo Li, and Ming Fang	589
KINETIC AND TRANSPORT THEORY	
Chemical gas-dynamics beyond Wang Chang-Uhlenbeck's kinetics Evgeniy G. Kolesnichenko and Yuriy E. Gorbachev	596
Rates of VT transitions and dissociation and normal mean stress in a non-equilibrium viscous multitemperature N₂/N flow E. V. Kustova and G. P. Oblapenko	602
Kinetic models with chemical reactions and nonequilibrium entropy in open systems Vladimir Aristov, Anna Frolova, and Sergey Zabelok	610
Kinetic model and moment method for polyatomic gases Behnam Rahimi and Henning Struchtrup	618
Hyperbolic moment equations using quadrature-based projection methods J. Koellermeier and M. Torrilhon	626
Kinetic force method and two-particle kinetic equation V. L. Saveliev, S. A. Filko, and Shigeru Yonemura	634
Translation invariant kinetic models on integer lattices Hans Babovsky	640
Coherent Rayleigh-Brillouin scattering: Influence of the intermolecular potential Lei Wu, Craig White, Thomas J. Scanlon, Jason M. Reese, and Yonghao Zhang	648

Thermo-optical piston in gases I. V. Chermyaninov and V. G. Chernyak	653
Processes of aggression described by kinetic method V. V. Aristov and O. Ilyin	661
Deviation from the Knudsen law on quantum gases Gulru Babac	667
Use of finite volume radiation for predicting the Knudsen minimum in 2D channel flow Chetan P. Malhotra and Roop L. Mahajan	674
Half-space problem for linearized ES–BGK model equation with unsteady evaporation and condensation flows Masashi Inaba and Takeru Yano	683
Steady flow of highly rarefied gas in half space induced by gravity and non-uniform wall temperature Tetsuro Tsuji, Yudai Katto, and Satoyuki Kawano	688
PART B	
MICRO- AND NANO-SCALE FLOWS AND DEVICES	
Amplification and reversal of Knudsen force by thermoelectric heating William J. O'Neill, Mizuki Wada, Andrew D. Strongrich, Anthony Cofer, and Alina A. Alexeenko	697
Knudsen torque on heated micro beams Qi Li, Tengfei Liang, and Wenjing Ye	705
Occurrence of Knudsen minima in diverging microchannels Vadiraj Hemadri, Upendra Bhandarkar, and Amit Agrawal	712
Experimental measurements and modeling of convective heat transfer in the transitional rarefied regime Andrew D. Strongrich and Alina A. Alexeenko	717
Gas flow meter based on calorimetric flow microsensor Oleg Sazhin	725

The response of a confined rarefied gas to non-periodic acoustic excitation A. Manela and G. Oskar	733
Approach to acoustic cloaking in rarefied gases L. Pogorelyuk and A. Manela	740
Moment equations and gas-kinetic scheme application to numerical simulation of gas flows in micro scale devices M. Yu. Timokhin, I. E. Ivanov, and I. A. Kryukov	748
Near continuum gaseous Falkner-Skan flows Chunpei Cai and Gerardo L. Rodriguez	756
Assessment of a modified slip boundary condition of the Navier-Stokes equation for the oscillatory Couette flows Qin Yang, Haijun Zhang, and Yulu Liu	765
Slightly rarefied gas flows over a sphere Chunpei Cai and Quanhua Sun	770
A study of floating of a slider with micro/nanoscale surface structure on a rotating disk Shigeru Yonemura, Susumu Isono, Masashi Yamaguchi, Yoshiaki Kawagoe, Takanori Takeno, Hiroyuki Miki, and Toshiyuki Takagi	778
Study of temperature drop in microchannel using direct simulation Monte Carlo method Abhimanyu Gavasane, Amit Agrawal, A. M. Pradeep, and Upendra Bhandarkar	785
Numerical analysis of gas separator with thermal transpiration in micro channels II Shoeji Nakaye and Hiroshi Sugimoto	792
Asymptotic modelling of the axisymmetric flow of a binary gas mixture in a circular microchannel C. Croizet and R. Gatignol	799
Asymptotic modelling of the flow of a thermal binary gas mixture in a microchannel R. Gatignol and C. Croizet	807
Rarefied gas flow into vacuum through a long circular pipe composed of two sections of different radii V. A. Titarev and E. M. Shakhov	815

Mass flow rate and pressure distribution of gas through three-dimensional micro-channels Jianzheng Jiang and Jing Fan	824
Comparison of analytic models of instability of rarefied gas flow in a channel Olga A. Aksenova and Iskander A. Khalidov	828
Free-molecular gas flow through the high-frequency oscillating membrane Artem Yakunchikov, Valery Kovalev, and Vasili Kosiantchouk	836
Gas flows through double-layer membrane of thermomolecular pump Friedlander Oscar, Nikolskiy Yuriy, and Voronich Ivan	841
Effects of shear work on non-equilibrium heat transfer characteristics of rarefied gas flow through micro/nanochannels Mojtaba Balaj, Ehsan Roohi, and Hassan Akhlaghi	849
Numerical analysis of micro-/nanoscale gas-film lubrication of sliding surface with complicated structure Yoshiaki Kawagoe, Shigeru Yonemura, Susumu Isono, Takanori Takeno, Hiroyuki Miki, and Toshiyuki Takagi	856
MOLECULAR BEAM AND COLLISIONS	
Recent advances in fullerene science (Invited) P. W. Dunk, M. Mulet-Gas, A. Rodriguez-Forte, J. M. Poblet, A. G. Marshall, and H. W. Kroto	862
Cold ion UV photofragmentation spectroscopy and dynamics (Invited) Geraldine Feraud, Michel Broquier, Claude Dedonder, Christophe Jouvét, Gilles Gregoire, and Satchin Soorkia	870
Laser induced fluorescence spectroscopy of the Ca dimer deposited on helium and mixed helium/xenon clusters Marc-André Gaveau, Christophe Pothier, Marc Briant, and Jean-Michel Mestdagh	879
Experimental and numerical study of high intensity argon cluster beams N. G. Korobeishchikov, P. A. Skovorodko, V. V. Kalyada, A. A. Shmakov, and A. E. Zarvin	885
MOLECULAR DYNAMICS SIMULATIONS	
A comparison of molecular dynamics and diffuse interface model predictions of Lennard-Jones fluid evaporation Paolo Barbante, Aldo Frezzotti, and Livio Gibelli	893

Thermal transpiration: A molecular dynamics study Joe Francis T and Sarith P. Sathian	901
Molecular dynamics study on the vapor-liquid interface of Ar-Ne mixtures Kyohei Yamaguchi, Masashi Inaba, and Takeru Yano	909
Molecular dynamics analysis of metal surface sputtering due to bombardment of high energy particles K. Kishore Kumar, Ferdin Sagai Donbosco, and Rakesh Kumar	916
Analysis of nanoscale two-phase flow of argon using molecular dynamics Abhishek Kumar Verma and Rakesh Kumar	925
Bombardment of gas molecules on single graphene layer at high temperature Ramki Murugesan, Jae Hyun Park, and Dong Sung Ha	933
Rate coefficients for dissociative attachment and resonant electron-impact dissociation involving vibrationally excited O₂ molecules V. Laporta, R. Celiberto, and J. Tennyson	939
NUMERICAL SOLUTIONS OF KINETIC EQUATIONS	
A survey of deterministic solvers for rarefied flows (Invited) Luc Mieussens	943
Solving kinetic equations with adaptive mesh in phase space for rarefied gas dynamics and plasma physics (Invited) Vladimir Kolobov, Robert Arslanbekov, and Anna Frolova	952
A numerical adaptive method for solving kinetic equations based on local velocity grids Stéphane Brull and Luc Mieussens	962
Unified gas-kinetic scheme for multi-species non-equilibrium flow Ruijie Wang and Kun Xu	970
A unified gas-kinetic scheme for axisymmetric flow Shiyi Li, Qibing Li, and Song Fu	976
A stable Runge-Kutta discontinuous Galerkin solver for hypersonic rarefied gaseous flows Wei Su, Bijiao He, and Guobiao Cai	980

A cut cell method for the 3D simulation of Crookes radiometer Guillaume Dechriste and Luc Mieussens	988
A Cartesian grid-based unified gas kinetic scheme Songze Chen and Kun Xu	995
A fast conservative spectral solver for the nonlinear Boltzmann collision operator Irene M. Gamba, Jeffrey R. Haack, and Jingwei Hu	1003
Deterministic GPU Boltzmann solver S. A. Zabelok, A. V. Stroganov, and V. V. Aristov	1009
Stabilization techniques in finite element discretizations for moment approximations Armin Westerkamp and Manuel Torrilhon	1016
A discretization of Boltzmann’s collision operator with provable convergence Stefan Brechtken	1024
Discrete velocity computations with stochastic variance reduction of the Boltzmann equation for gas mixtures Peter Clarke, Philip Varghese, and David Goldstein	1032
Numerical simulation of large hyperbolic moment systems with linear and relaxation production terms Zhenning Cai and Manuel Torrilhon	1040
Nonequilibrium hypersonic flows simulations with asymptotic-preserving Monte Carlo methods Wei Ren, Hong Liu, and Shi Jin	1048
Numerical investigation of plane plume exhausting from wedge-like micronozzle A. A. Shershnev and A. N. Kudryavtsev	1056
Numerical analysis of flows of rarefied gases in long channels with octagonal cross section shapes L. Szalmas	1063
Time-dependent rarefied gas flow into vacuum from a long circular pipe closed at one end Evgeniy M. Shakhov and Vladimir A. Titarev	1071

PARTICLE METHODS FOR FLOW SIMULATIONS

Test particle Monte Carlo simulation of return flux due to ambient scatter of outgassing molecules
Xuhong Jin, Fei Huang, and Xiaoli Cheng 1079

Two critical issues in Langevin simulation of gas flows
Jun Zhang and Jing Fan 1087

Glow and arc modes in field emission driven microplasmas
Ayyaswamy Venkatraman 1095

Transition of diffusion mechanism from molecular thermal motion to macroscopic temporary fluctuation
Jing Fan 1103

PLASMA FLOWS AND PROCESSING

Development of magnetron sputtering simulator with GPU parallel computing
Ilyoup Sohn, Jihun Kim, Junkyeong Bae, and Jinpil Lee 1107

Stochastic simulation of electron avalanches on supercomputers
S. V. Rogasinsky and M. A. Marchenko 1116

Numerical simulation of nonequilibrium inductive plasma flow coupled with electromagnetic field calculation
Minghao Yu, Yusuke Takahashi, Hisashi Kihara, Ken-ichi Abe, Kazuhiko Yamada, and Takashi Abe 1124

Numerical analysis of the plasma flow in an arcjet thruster
Bijie Yang and Quanhua Sun 1132

Experimental and numerical study of gas dynamic window for electron beam transport into the space with increased pressure
P. A. Skovorodko and R. G. Sharafutdinov 1139

Efficiency of plasma actuator ionization in shock wave modification in a rarefied supersonic flow over a flat plate
Romain Jousot, Viviana Lago, and Jean-Denis Parisse 1146

3D nozzle flow simulations including state-to-state kinetics calculation
L. Cutrone, M. Tuttafesta, M. Capitelli, A. Schettino, G. Pascazio, and G. Colonna 1154

RADIATION AND PLASMA FLOWS

- Multi-temperature model derived from state-to-state kinetics for hypersonic entry in Jupiter atmosphere**
G. Colonna, D. D'Ambrosio, G. D'Ammando, L. D. Pietanza, and M. Capitelli 1162
- Key issues of ultraviolet radiation of OH at high altitudes**
Yuhuai Zhang, Tian Wan, Jianzheng Jiang, and Jing Fan 1168
- ## REACTION AND RELAXATION PROCESSES
- Problems and perspectives of state-to-state kinetics for high enthalpy plasma flows (Invited)**
Gianpiero Colonna 1176
- Reacting gas mixtures in the state-to-state approach: The chemical reaction rates**
Elena V. Kustova and Gilberto M. Kremer 1186
- State-to-state and simplified models for shock heated reacting air flows**
O. Kunova, E. Nagnibeda, and I. Sharafutdinov 1194
- The influence of state-to-state kinetics on diffusion and heat transfer behind shock waves**
O. Kunova, E. Kustova, M. Mekhonoshina, and E. Nagnibeda 1202
- Influence of ionization on the Gupta and on the Park chemical models**
Luigi Morsa and Gennaro Zuppardi 1210
- Effect of electronic excitation on high-temperature flows behind strong shock waves**
V. A. Istomin and E. V. Kustova 1221
- Validity of Eucken formula and Stokes' viscosity relation in high-temperature electronically excited gases**
V. A. Istomin, E. V. Kustova, and M. A. Mekhonoshina 1229
- Relaxation of quantum state population and volume viscosity in He/H₂ mixtures**
D. Bruno, F. Esposito, and V. Giovangigli 1237
- Mars sample return orbiter: Detailed vibrational-chemical kinetics and heat transfer**
I. Armenise and E. Kustova 1245

Self-diffusion of vibrational states: Impact on the heat transfer in hypersonic flows E. Josyula, E. V. Kustova, and P. Vedula	1253
Investigation of spontaneous combustion of hydrogen-oxygen mixture using DSMC simulation Chao Yang and Quanhua Sun	1261
SPACE VEHICLES AERODYNAMICS	
Aero-thermo-dynamic analysis of the Spaceliner-7.1 vehicle in high altitude flight Gennaro Zuppardi, Luigi Morsa, Martin Sippel, and Tobias Schwanekamp	1268
Analysis of electromagnetic scattering characteristics for a HTV-2 type flight vehicle ablation flows Chun Shao, Liang Nie, and Weifang Chen	1277
Rarefied aerodynamic measurements in hypersonic rarefied wind tunnel T. Ozawa, T. Suzuki, and K. Fujita	1284
Measured force on elongated bodies in a simulated low-Earth orbit environment C. A. Maldonado, A. D. Ketsdever, and S. F. Gimelshein	1292
Free molecular gas flows over a flat plate Chunpei Cai	1300
Modeling study of rarefied gas effects on hypersonic reacting stagnation flows Zhihui Wang and Lin Bao	1310
Influence of boundary slip effect on thermal environment in thermo-chemical non-equilibrium flow Wenbo Miao, Liang Zhang, Junhong Li, and Xiaoli Cheng	1318
Analytical prediction of heat transfer and skin friction in 3D transitional hypersonic flows over blunt bodies Irina G. Brykina	1324
Aerodynamic shape optimization of space vehicle in very-low-earth-orbit Jae Hyun Park, Rho Shin Myong, Dong Hyun Kim, and Seung Wook Baek	1331
Comparison of the simulated and LIDAR measured atmospheric density and temperature in lower thermosphere Tian Wan, Guoqing Hu, Jianzheng Jiang, Hongli Liu, Jing Fan, Weilin Pan, and Shuai Qiao	1337

Gasdynamic substantiation of physical theory of meteors Lidia A. Egorova and Grigoriy A. Tirskiy	1342
TURBULENCE	
Molecular simulation of 3D turbulent channel flow Dandan Zeng, Fengquan Zhong, and Jing Fan	1349
Statistical simulation of decaying and forced homogeneous isotropic turbulence Fei Fei, Jing Fan, Chunxiao Xu, Yang Song, and Zhaohui Liu	1356
A gas-kinetic scheme for the simulation of turbulent flows Marcello Righi and Ruijie Wang	1363
VACUUM GAS DYNAMICS	
Study of vacuum gas flows with the unified gas-kinetic scheme Xueli Luo, Ruiji Wang, Christian Day, and Kun Xu	1371
An extended CFD model to predict the pumping curve in low pressure plasma etch chamber Ning Zhou, Yuanhao Wu, Wenbin Han, and Shaowu Pan	1378
IVANOV MEMORIAL SESSION	
Mach reflection in steady flow. I. Mikhail Ivanov's contributions, II. Caltech stability experiments Hans G. Hornung	1384
A spacecraft's own ambient environment: The role of simulation-based research Andrew D. Ketsdever and Sergey Gimelshein	1394
